1:15 PM

Hi, I'm Manoj. I have about 2.7 years of experience as a Java Full Stack Developer at Volkswagen Group Technology Solutions India in Bangalore. I completed my B.Tech in Computer Science from MVJ College of Engineering in 2023.

Currently, I work on the EMI DB platform — that's our Emissions and Material Data system, used to track, manage, and report materials and environmental impact data for vehicles.

On the backend, I work with Java and Spring Boot to build REST APIs, with Spring Security and JWT for authentication. We also use AWS Lambda and API Gateway, with gRPC for communication between Lambda and our backend services, and store data in MySQL and S3.

On the frontend, I work with React and TypeScript to build the interfaces that consume these APIs.

I've gotten solid exposure across the full stack, and I'm now looking to take on roles where I can go deeper into Java backend development and Spring Boot.
